

Minus80 Monitoring – Academic Research Protection

Wireless temperature monitoring reduces risk in labs on college campuses

Using Minus80 Technology to Protect Lab Research & Vaccines

For freezers containing a lifetime of research samples or refrigerators containing health center vaccines, it is critical to have all contents closely monitored to ensure the highest of quality. It is also important for the right people to know in advance of a failure so action may be taken. Minus80 provides a subscription-based monitoring solution making it easy for campuses to affordably subscribe to our monitoring service. Minus80's Mobile App shows real-time temperatures and door status, allowing you to take proactive measures, prevent sample loss, and reduce financial risk.

Minus80's web portal lets you customize all settings yourself from anywhere. You determine who gets alerted and when on alarms for your freezers, refrigerators, incubators, environmental chambers, and LN2 storage units. Minus80 was designed with specific focus on academic research labs. Call 855.646.8780 or email info@minus80monitoring.com today to give the Minus80 Monitoring solution a no obligation, two month 'trial run'. References are available from Princeton University, Northeast Ohio Medical University (NEOMED), NC State, UVA, College of William & Mary, Duke Medical, and the New York Stem Cell Foundation.

Minus80 Monitoring, Charlottesville, Virginia

The founding team at Minus80 brings a deep level of experience and understanding in critical system monitoring that is tailored for the academic laboratory research environment. Bringing this technology to Minus80 helps enhance campus-wide loss prevention protocols, helps predict early storage unit failure, and mitigates risk.

Please share flyer on the next page with your labs on campus – two month, no cost trial for everyone. The link for this article may be found listed on our website at <http://minus80monitoring.com/case-studies>

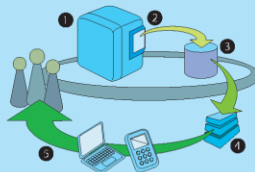

Minus80 Monitoring

Affordable protection, greater peace of mind.

Smart, Wireless & Mobile

- Cloud-based temperature and door monitoring for any controlled storage unit
- Mobile App and web portal to see real-time status
- Alerting via text, voice, and email
- Data securely logged and archived; graphical reports
- No ongoing maintenance
- Low cost subscription service
